time.sleep

# Using Android's `Timer.schedule` in Python

Asked 10 years, 1 month ago   Active 8 years, 9 months ago   Viewed 847 times

Could someone explain how to use the [Timer.schedule](#) - that is used for scheduling tasks - in [Python](#)?

2

Note that Python's `time.sleep` will not work in Android.

I'm working in the android environment and have tried the following code, but it doesn't seem to be working.

```
String [] stockArr = (String[]) stock_list.toArray();
```

If I define as follows:

```
String [] stockArr = {"hello", "world"};
```

it works. Is there something that I'm missing?

```
List<Order> objListOrder = new List<Order>();
```

```
GetOrderList(objListOrder); // fill list of orders
```

# How to Sort a List<T> by a property in the object

Asked 9 years, 7 months ago   Active 1 year, 2 months ago   Viewed 1.2m times

I have a class called `Order` which has properties such as `OrderId`, `OrderDate`, `Quantity`, and `Total`. I have a list of this `Order` class:

1186

```
List<Order> objListOrder = new List<Order>();  
GetOrderList(objListOrder); // fill list of orders
```

★  
213

Now I want to sort the list based on one property of the `Order` object, for example I need to sort it by the order date or order id.

How can i do this in C#?

`c#` `generics` `list` `sorting`

I have an array of numbers, and I'm using the `.push()` method to add elements to it.

Is there a simple way to remove a specific element from an array? The equivalent of something like

```
array.remove(number);
```

★  
1232

I have to use *core* JavaScript - frameworks are not allowed.

Consider:

```
$a = 'How are you?';  
  
if ($a contains 'are')  
    echo 'true';
```

Suppose I have the code above, what is the correct way to write the statement `if ($a contains 'are')`?
